**AIR BAG
Simulator**
available!
No. 3770

Includes PC diagnostic software!

Universal design emulates nearly all OE simulators currently available. You need only this one tool, not several vehicle specific tools.

- The No. 3770 replaces the air bag in the system and puts the proper electrical load on the circuit. With no air bag installed, there is no chance for accidental deployment during testing.

- If a deployment condition is present in the system, the simulator will “blow”, not the expensive air bag. You can then find the problem and verify the fix before making the air bag “live” again.

- All systems typically turn themselves off after an intended deployment due to a collision. Use the No. 3770 to check for other problems before rearming the system with an air bag scan tool such as the OTC No. 3761.

- Includes a CD that lifts the fog off air bag service. It covers diagnostics, wiring schematics, and rearming procedures on 1983 thru 2000 domestic and import cars, vans, and light trucks.

No. 3761
