5-Stage Filter/Dryer Includes:

- 1** .40 micron sintered bronze filter – removes dirt particles and debris
- 2** Oil Removing Activated Charcoal –removes all oil vapor and oil down to .0015 ppm
- 3** Sintered bronze separator, separates the activated charcoal from the desiccant beads and also takes out
- 4** Desiccant Beads – Beads lower the dew point to -40 degrees and remove all water vapor – visually and easily see the beads turn from **blue** to **pink**, once all the beads turn pink – it is than time to replace the removable cartridge
- 5** . 40 micron sintered bronze filter – prevents any desiccant dust or other possible particles from entering the compressed air system
