TOUGH AND TINTABLE PROTECTIVE COATING

About **RAPTOR**

U-POL RAPTOR Tough and Tintable Protective Coating is a durable urethane coating that provides surfaces with a protective barrier that can withstand the toughest situations.

Developed to tolerate most climatic conditions, RAPTOR is UV resistant and won't fade or "chalk" even after years in the sun. RAPTOR is also waterproof and protects surfaces from rust making it perfect for substrates that will be submerged in water, including salt water.

RAPTOR's versatility makes it perfect for almost any application. Spray or roll RAPTOR on high traffic areas; it's scratch and stain resistant and easy to clean, simply hose it off. Its flexible formulation can handle impacts without cracking, making it perfect for its most popular application as a truck bedliner.

RAPTOR is unlike other bedliners or protective coatings. 2-component urethane technology far surpasses the durability of epoxy and 1-component coatings. And in case it does scratch (which is tough to do!), RAPTOR can easily be repaired. You can't do that with most of the other bedliners and protective coatings!

RAPTOR protects industrial surfaces in the harshest environments as well as the smaller surfaces we rely on every day. It's durable, tintable, looks great and lasts a long time. When you need a surface protection solution that can stand up to the elements, choose RAPTOR!

RAPTOR Application & Procedure Guide

RAPTOR is a textured coating suitable for use over the following properly prepared substrates:

OEM paint, primed metal, primed aluminum, primed galvanized, fiberglass, SMC, wood, concrete and powder coat

Process tools required: RAPTOR product, safety glasses, respirator, 120-180 grit sandpaper, red scuff pads, U-POL Application Gun (UP0726) or roller brush

CLEAN

SUBSTRATE

SAND SUBSTRATE

Remove all loose material Sand surface with 80-180 and rust. Clean and grit sandpaper. Use red degrease surface with scuff pad for difficult to wax and grease remover sand areas. Re-clean the surface, RAPTOR can (UP2012 or UP2022). be directly applied over painted surfaces that have

PRIME SURFACE Spot prime any areas

where bare metal has been exposed in **Step 2**. Bare metal, aluminum or galvanized surfaces must be primed with an etch primer like ACID#8 (UP0741V), or a DTM epoxy or urethane primer following manufacturer's recommendations. Use GRIP#4 (UP0799) in hard

MIX RAPTOR

RAPTOR has a 3:1 mix ratio, Pour 250ml of the RAPTOR hardener into the pre-filled bottle of 750ml of RAPTOR coating or combine RAPTOR and hardener at a 3 parts RAPTOR to 1 part hardener ratio in a separate container. For tinting, please consult the technical datasheet.

SHAKE

Shake bottle or stir (if mixing in separate container) for 2 minutes to thoroughly mix the product.

SHOOT

Attach application gun to bottle. Adjust supplied air pressure to 40-60 PSI depending on desired texture. At a distance of 18 - 30 inches, apply to the prepared surface in a sweeping motion to obtain desired texture. Pot life: approximately 60 minutes.

been cleaned and sanded.

ADDITIONAL COATS

2 or 3 light coats are better than one heavy coat. If applying more than one coat, allow RAPTOR to flash 60 minutes between coats. If more than 5 hours or clearcoat if desired. between coats, allow it to set overnight, lightly scuff and apply additional coat(s).

to reach areas.

TOP COATING

RAPTOR can be over painted with most modern paint systems. Allow RAPTOR to dry for 24 hours, scuff with fine scuff pad, clean, apply top coat

DRY TIMES

Dry to Touch: 1 hour. Light Duty Use: 2-3 days. Heavy Duty Use: 7 days.

EQUIPMENT CLEAN UP

Clean gun, equipment and over spray with lacquer thinner or acetone before RAPTOR is fully cured.
